

THE TRIGGERBOX

The TriggerBox

At-a-Glance

The TriggerBox is a cloud-based storage and delivery platform for end of transaction (EOT) digital files. With enhanced security and delivery options utilizing unique triggers, businesses can deliver content now or in the future.

ADVANTAGES:

- Secure both in transit and at rest
- See all activity with full date and time stamp on all actions
- Conditionally deliver files with digital key, date and legacy triggers
- Brand your company on boxes that you send to your clients

"The TriggerBox makes our company more productive and gives our clients peace of mind." -- Darian Barrett, V.P. Operations, Granite Asset Management

Securely Organize and Share Files

Companies frequently transfer digital end of transaction (EOT) files during the course of normal business interactions with customers, clients and business partners. Many of these files contain sensitive information. Often these documents are stored and transferred insecurely via email or on cloud sharing platforms with little consideration to risk.

The TriggerBox solves this challenge by providing a simple and cost effective way to securely organize and deliver your sensitive files. Think of a virtual safety deposit box where users can securely store and transfer documents with co-branded marketing and full activity logging on the box and contents. The sleek and responsive design gives a modern feel that works for all platforms and operating systems.

TriggerBox Features and Benefits

-  **Upload & Organize** – Upload files to our secure cloud and organize them in boxes with complete control over who can view them and when.
-  **Securely Deliver** – Don't send files via email, send them securely through our platform.
-  **Branding** – Add greater visibility for your company through branded boxes.
-  **Audit Logging** – All activity is logged with user and date and time information including when documents are downloaded.
-  **Future Delivery** – With our unique triggers you can set a box to be delivered on a certain day or conditionally using digital key, date or legacy triggers.
-  **Encryption** – All files are transmitted with strong SSL 4096-bit encryption and each file is stored at rest with AES-256 bit encryption.
-  **Reduce Costs** – Reduce customer service calls and resources due to misplaced documents.
